Zabibu
Fikra

COMPANY & PRODUCT OVERVIEW / NOVEMBER 2026

Private AI, built for the edge.

Zabibu Technika builds open-weight, on-device language models and agent tools from Nairobi, Kenya. The Fikra family is designed for private, offline-first work on the machines people already have.

THE OPPORTUNITY

Cloud inference is powerful, but it is not the right fit for every deployment. Privacy-sensitive work, intermittent connectivity, latency-sensitive tools, and data-sovereignty requirements all point to local inference.

At the same time, 4B-class models are now good enough for real work. Fikra Model 2 runs in 2.71 GB in Q4_K_M, fits a laptop, and can fit a high-end phone.

African language coverage remains thin in mainstream models. Fikra is built with English–Swahili code-switching and Pan-African context as first-class requirements, not an afterthought.

The open-weight model creates distribution; the commercial runtime, support, and enterprise deployment layer create revenue.

WHAT WE HAVE SHIPPED

PRODUCT	WHAT IT IS	STATUS
Fikra Model 2 – 4B	Apache 2.0, 262K context, EN/SW, 91.3% release suite	Released
Fikra Model 1 – 2B	131K context, Gemma-4-2B-it base, custom license	Released
Weaver	Terminal coding agent with onboarding and receipts	Available
Zabibu Arif	Multi-axis agent workspace and CLI	Available
Fikra Edge Runtime	Commercial deployment layer for Fikra models	Pilots

CONTEXT

BUSINESS MODEL

- **Open weights** — Apache 2.0 for Fikra Model 2, which drives adoption and developer trust.
- **Fikra Edge Runtime** — a commercial runtime with scheduling, resilient workflows, and local data sovereignty for enterprise deployments.
- **Support and integration** — deployment help, evaluation, and custom work for organizations that need private AI.
- **Agent products** — Weaver and Zabibu Arif as distribution and proof of what the models can do.

ROADMAP

- Fikra Edge Runtime commercial pilots and managed deployment.
- Expand the Fikra model family and evaluation suite.
- Enterprise integrations for regulated, offline, and low-connectivity environments.
- Developer tooling for local agents, retrieval, and receipts.

WHY NOW

Inference efficiency is improving faster than most deployment teams can re-architect. A 4B model that fits on a laptop or phone changes the economics of privacy-sensitive AI. Kenya and the wider region are digitizing quickly, and local-language capability is a durable differentiator.

ENGAGE

For a data room, financial detail, or a technical deep dive, contact **zabibu.vercel.app/contact**. The public model card, benchmarks, and weights are at **huggingface.co/zabibutechnika**.
